Oil Fired Unit Heaters

OUHA Axial Fan

OUHC Centrifugal Fan

OUH Series

Introduction

The Benson Heating range of oil fired unit heaters is suitable for a wide variety of commercial and industrial applications.

OUHA units are fitted with a high capacity axial fan for optimum air distribution. The OUHA 60 - 100 models are fitted with twin fans.

OUHC models have a centrifugal fan for ducted installations.

Model Range

The OUH Series oil fired heaters are available in six heat outputs ranging from 31kW to 98kW, for use on 35 seconds oil.

Alternatively, units may be specified for use with Kerosene (28 seconds).

Features & Benefits

- High thermal efficiency 90 - 91% (based on net calorific value) resulting in lower running costs
- Space saving - all units can be either suspended or base mounted thereby freeing up floor space for production or storage requirements
- Simple low installation costs
- Units 30, 60 and 90 are eligible for Enhanced Capital Allowances

Optional Equipment

A range of options are available. These include:

- Stainless steel heat exchanger
- High/low burner on models 60 - 100
- Combustion air adaptor
- SmartCom³ control complete with summer fan only facility
- Vertical louvres and downflow nozzles
- Wall brackets
- Mixing plenum box dampers and filters (OUHC only)

ECA

This symbol verifies that models 30 (100), 60 (200) and 90 (300) currently qualify for the ECA scheme, an up-front tax relief enabling businesses that invest in energy-saving equipment to claim 100% first-year capital allowances against their taxable profits.

Specification

Heat Exchanger and Burner

The high efficiency heat exchanger is designed for both long operational life and low resistance to airflow through the unit.

Air Distribution

Powerful axial fans fitted on OUHA models provide optimum air distribution via horizontal outlet louvres.

OUHC units are designed for ducted applications and are fitted with centrifugal fans and a duct spigot outlet. A fan box plus optional dampers is also available on OUHC models.

Cabinets

Cabinets are constructed from electro zinc coated steel panels, finished in epoxy polyester powder coated paint.

Safety Controls

To ensure safe automatic operation, each unit is fitted as standard with comprehensive safety controls and flame monitoring. To prevent against insufficient airflow a limit thermostat is fitted which shuts down the heater in the event of overheating.

Installation

Units may be suspended or alternatively mounted on a suitable non-combustible support. Four M10 suspension points are provided to each heater.

Each heater is supplied with a loose fire valve and oil filter. An additional oil fire valve should be installed external to the building where required in accordance with BS 5410:Part2:1978.

A single phase electrical supply is required to each unit. This supply should not be switched off except for maintenance.

An optional rear spigot connection can be provided when ducted combustion air to the burner is required.

Units must not be installed in atmospheres containing highly flammable or explosive vapours, combustible dust, halogenated hydrocarbons or chlorinated vapours. They are also unsuitable for areas where contaminants may affect electrical motors or connections.

Applications

- Factories
- Greenhouses
- Warehouses
- Workshops
- Showrooms
