## GENERAL INFORMATIONS

### DESCRIPTION:

New generation control panel, designed for the command and management (even remotely for the “Plus” model only) of one or more ColdAir equipped with relative internal temperature probes (external on request) and humidity.

### ADVANTAGE:

- allows control from both the Cloud and/or the APP (for the “Plus” model only)
- manages up to 16 independent ColdAir ( total 32 probes)
- allows programming for a total of 28 timer events
- reduction of energy consumption by means of external thermal probe (optional)
- clarity of reading thanks to the 3.2” LCD display with text on a black anti-glare background
- Manages up to a maximum of two global probes

### TECHNICAL FEATURES:

- Power Supply : 230 Vac
- Consumption: 5 W
- Dimension: 180x150x65 mm
- Protection: IP44
- Use temperature: 10°C / 40°C

### SYSTEM EXAMPLE SCHEME:

**COMMAND DESCRIPTION:**

Enable or disable the selected network module

Access the set-point of the selected grid module

Select manual and/or automatic , by accessing the list of timer programs

Access to the main menù, and if there are any errors, to see what error it is

Access to the various submenùs and confirm parameters

Selection of the various network modules connected and/ora increases the value of the selected paremeter

Selection of the various network modules connected and/ora decreases the value of the selected paremeter

Exit the selected function and/or return to the previous menù

## NETWORK CONNECTION DEACTIVATION/ACTIVATION (only for model PLUS) :

Before proceeding with any procedure , it is necessary to check whether the display is enable or disabled the connection to the network.

This check is necessary because, if this setting is enable, it will not be possible to access many of the basic functions listed below from the keyboard.

To check this parameter, proceed as follows:

- Press the buttons  + 
- The message “HoR” will appear on the display, press key 
- Modify the parameter using keys   and set it to “1”
- Press the button  to confirm
- To exit the menù press  or wait 5 sec

HoR = 0    display connected to a network, it is possible to access and modification of all parameters by Cloud or by App.

HoR = 1    display disconnected from the network so access is not allowed to the various parameters by Cloud ar App , but only by keyboard

## DATE AND TIME SETTING:

The first operations to be performed is setting the correct date and time.

At the first start, the display will show the hour flashing for a few minutes.

It will be possible in that time frame to change the time and date without accessing any menu and/or function.

Here is how to change the date and time by accessing the appropriate menu:

- Check it is on the "home" screen (led  on)
- Press the button  until the icon 
- It will be possible to change the time by buttons  
- To confirm press the key 
- At this point the minutes will be flashing. Proceed with the modification by repeating the same operations described for changing the time
- Repeat the same operations for day, year and month
- Confirm all by the button 

## SET-POINT SETTING:

To view the set-point parameters, access to the dedicated screen of the interest module.

For access on the dedicated screen press the button

Example screen:

Identify the module

Set-Point start parameters:

- Temperature : 26°C
- Humidity : 75%

To access the set-point parameters, proceed as follows:

- Press  to access the module menu
- Select the set menu by keys  
- Press  to enter
- The set –point parameters will be visible
- To modify a parameters press 
- Modify the parameters by  
- Press  to confirm
- For exit press  or wait 5 sec.

## VISUALIZATION INSIDE PARAMETERS:

To view the inside parameters, check that you are in the dedicated screen.

To access to the dedicated screen, view the operations in the previous paragraph.

To view the values by the probes, proceed as follows:

- Press  to access the menu of the module
- Select the "INFO" menu by  
- Press  to enter
- Select the parameters by  
- Press  view the parameters
- Press  to exit or wait 5 sec.

Values available for each module and/or thermal zone:

- TA: inside temperature
- UA: inside relative humidity
- ET: external temperature \*\*\*

\*\*\* = only optional external probe

Notes: if there is a single probe for multiples modules, it must already be configured.  
Max two global probes

## TIMER PROGRAMS SETTING:

The Qbo control display allows the definition of automatic activities for a total of 28 timer program for only module.

For a total of 448 possible combinations (28 program \* 16 modules)

These timer programs become active only "Automatic" mode.

It will not be possible to define a weekly function with a single program: this programming must necessarily be defined for each day of the week.

Before proceeding with the configuration of the timer programs, define how to manage the whole: single program for each thermal zone, one program for single module, or mixture. For this opportunity programs view parameters "t8" in menu "PAR" for only module: to access in "PAR" view the previous paragraphs.

Definition of parameter "t8" value :

- "t8"="no": time enable. 1 or 2 depending on thermal zone probe
- "t8"="YES": timer disable. Module responds only internal program timer regardless of the thermal zone to it is associated

Note: the definition of the thermal zone is done through hardware with the setting during installation (on the power board)

To set an automatic timer program proceed as follows:

- Press  to access the management menu of the module
- Select the "Fnc" menu using the keys  
- Press  to enter

- Select the “A-M” menu using the keys  
- Press  to enter
- Select “AUTOMATIC” using the keys  
- Access in the first free program with 

If the display shows “- - : - - “ then the selected programming space is free

If the selected programming space is full, access the next programming space by keys 

After selecting the appropriate programming space, proceed as follows:

- Press  until the icon appears on the display 
- Hour will start flashing. It will be possible to change it.
- Select the correct time using the keys  
- Press  to confirm
- The minutes will flash. To change the minutes, proceed as described above.
- Repeat the same sequence for day.
- Press  to exit

List of functions be selected:

- “COOL”
- “FAN”
- “OFF”

For correct operation in automatic mode, it will be necessary to associate the relative shutdown program to each program.

### DELETE ONE OR ALL TIMER PROGRAMS:

Select the timer program of interest, and proceed as follows:

- Press  until the message “- - : - -”
- The program is deleted
- Press  to exit

If to delete alle timer programs stored in memory, proceed as follows:

- Select any program
- Press  for at least 6 second until the message “EALL”

All time programs will be deleted. In memory, press  to exit

## ENABLING/ACTIVATING NETWORK MODULE:

Before proceeding with switching on the device, check that the module is enable.

Enabling allows the correct exchange of commands and data between the display and module.

Check the module is activated, proceed as follows:

- Access the module screen as described in the previous paragraphs

- Press  to access on the menù

- Select "FnC" menù by keys  

- Press  to enter

- Select "P-on" by keys  

- Press  to enter

- Select "P-on=1" by keys  

- Press  to enter

- Press  to exit

If "P-on=0" only some basic will be allowed. The communication of errors or commands from the display will not be active.

## OPERATION:

The Qbo control display allows the selection of the type of operation for each machine or for each thermal zone.

The possible modes of function are:

- MANUAL FAN
- MANUAL COOL
- AUTOMATIC

- "AUTO"
  - "COOL"
  - "FAN"
  - "OFF"

For a functions detail description view the cooler instruction (doc. STP 101.120)

It is described below how to select and activate the operating mode:

- Access the module screen as described in the previous paragraphs

- Press  to access on the menù

- Select the "FnC" menù by keys  

- Press  to enter

- Select "A-M" by keys  

- Press  to enter

- Select the correct operation by keys  

- Press  to confirm

- Press  to exit

NOTE: "H-C" parameter must be configured as "C" (Cool)

## FAN GROUP SPEED REGULATION:

The Qbo control display allows the selection of different fan unit speeds.

The number of speeds change in according to the cooler model.

As the speed of the fan group varies, the air will vary. The specific air flow for any fan speed are shown in the air cooling instruction.

The operations for modifying the fan speed are shown below:

- Access the module screen as in the previous chapters
- Press  to access menu
- Select "FnC" menu by keys  
- Press  to access menu
- Select "FAN" by keys  
- Press  to enter
- Select correct fan speed by keys  
- Press  to confirm
- Press  to exit

NOTE: the "AUTO" parameters of the "FAN" is the automatic/modulating speed

### QUICK ACCESS TO THE HOME PAGE:

Once all the operations have been completed, it may be necessary to return to the home page.

To quickly access the home page, press 

The led  will light up.

### NETWORK MODULE ACQUISITION UPTADE:

It may happen that one or more network modules are not correctly acquired by the system.

Proceed as follows:

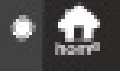

- Check it is in the home page ( led  on)
- Press 
- Select “Lrn” function by keys  
- Press  to confirm
- Select “YES” by keys  
- Press  to confirm

NOTE: at the first start the Qbo displays automatically start this function. But if the switch (on the power board ) was not set correctly, the module may not be acquired by the display

## KEYPAD LOCK AND UNLOCK:

The Qbo display allows the keyboard to be locked so that access to the functions is not impossible.

To lock or unlock the keyboard proceed as follows:

- Check it is in the home page ( led  on)
- Press 
- Select "PAR" by keys  
- Press  to enter
- "00" will appear. Press  to confirm
- Select "HL" by keys  
- Press  to enter
- Select "YES" by keys  
- Press  to confirm
- Press  to exit

"HL" parameters:

- "YES" = keypad lock
- "no" = keypad unlock

"Loc" = keypad lock. To temporarily unlock the keyboard proceed as follows:

- Press the buttons at the same time  
- "Unl" will appear

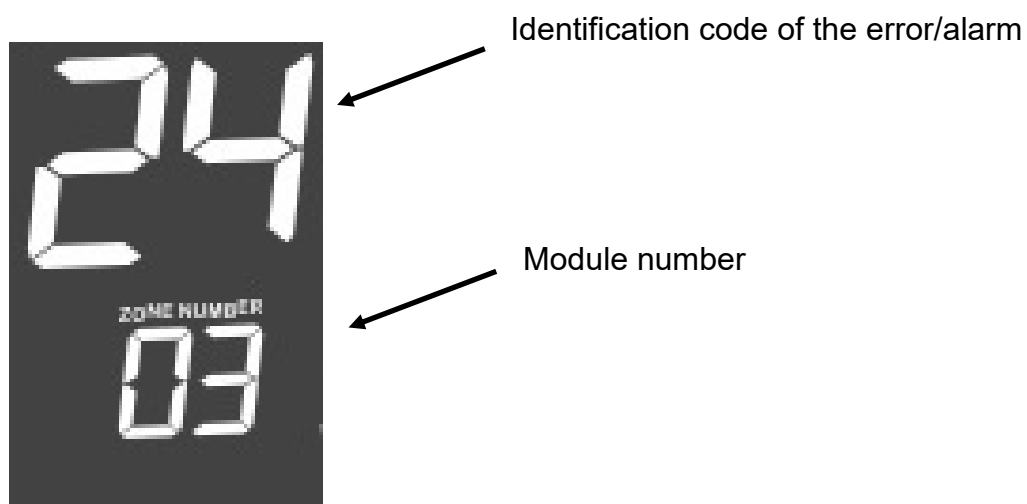

## ERROR AND/OR ALLARM REPORTING:

The Qbo display warns by means of a special icon  on the display that one or more modules are in error/alarm; it is possible to access the menu that indicates what type of error/alarm.

To view what error is, proceed as follows:

- Press 
- Select "ALSE" menu by keys  
- Press 

The display will then show the error code with module number:

**LIST OF ERROR AND/OR ALARM CODES:**

Below is a list of the main error codes:

- A10 = internal memory error (remove electric power and restart )
- A11 = network or module not available (restart acquisition module)
- A12 = module lost (view cod. A11)
- A13 = timer alarm (time reset)
- A15 = network not aligned (view cod. A11)
- A16 = hard alarm (turn off and remove electric power )
- A17 = floating alarm (call Impresind assistance )
- A19 = generic alarm (view cod. A16)
- A28 = external probe alarm (view cod. A17)
- A32 = network error (view cod. A11)
- A35 = serial number error (disconnect from web)
- A37 = upgrade required (view cod. A17)

If the error persists , proceed as follows:

- Remove electric power
- Close the water supply
- Call an authorized service center

## ACCESS TO REMOTE COMMANDS (only PLUS model):

The following preliminary checks are necessary:

- The control display (Plus model) must be enable for network connection
- The user must have an account authorized to access (by app)

It is necessary to enable the credential:

- Access the Pay-Store 
- Search Eye-Lan 
- Install app
- Enter
- Select "new account"
- Create new password

It will now be possible to control the system from your personal mobile phone or any PC.

NOTE: first to access from PC, access from app to confirm account.

## REMOTE CONTROL BY APP (only PLUS model):

First time , install app.

It will therefore be possible to control your cooling system from you mobile phone.

App is simple and very easy.

In the first screen there are following parameters:

- Set-point temperaturer
- Inside temperature
- Current state (Fan, Cool, ecc ecc)
- Current function ( Manual, Automatic, ecc ecc)

For the automatic cunction there is an apposite page:

- Program time
- Program Parameters
- New program
- Canc one ore any programs

It is possible to access more interest pages, example allarm page.

Also allow to view a performance graphic with parameters trend.

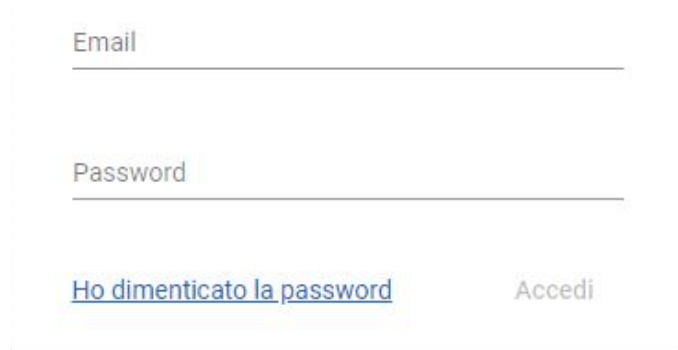

## REMOTE CONTROL BY CLOUD (only PLUS model):

All the functions described in the previous paragraphs are also accessible from the Cloud (InuBesForYou.it)

Access the site:

nubesforyou.com/login

Enter your account:

The login form contains two input fields: 'Email' and 'Password'. Below the 'Password' field, there is a blue link that reads 'Ho dimenticato la password' and a button labeled 'Accedi'.

Access the home page of your system:
